

PRESS RELEASE

Michelndorf, 20/10/2017

AGRI FARM at Agritechnica

AGRI FARM stands for first-class tillage equipment.

This year is already being exhibited for the fourteenth time at the world's largest agricultural fair Agritechnica.

The completely new developed cultivator EUROFLEX is presented as a special novelty: The basis for the new design are 40 years of experience in the production of cultivators and the demand for a cultivator for finer, blockage-free and heap-free work, for best mixing and uniform reconsolidation, as well as the suitability for incorporation of large quantities of maize straw.

The new EUROFLEX cultivator meets these requirements:

5 rows of tines, a completely regular tine distribution and 70 cm frame height can handle even large amounts of crop residues easily and mix them evenly with the soil. An intermediate harrow distributes the finely mixed mass, finally the hydraulically adjustable heavy bar- or packer roller solidifies the soil.

The newly designed frame of the EUROFLEX cultivator has been optimized in terms of weight.

The cultivator is available in working widths of 2.5 m - 10 m.

The higher steel quality ST52 / S355 is a matter of course for AGRI FARM devices.

AGRI FARM will exhibit at the Agritechnica in Hanover from November 12th to 18th in Hall 11, Stand B20.

About AGRI FARM Maschinenbau GesmbH

The family-run, medium-sized company AGRI FARM Maschinenbau GesmbH, founded in 1977 by engineer Franz Reiter, is a manufacturer of innovative agricultural tillage implements.

The extensive product range includes various types of cultivators, disc harrows, subsoilers, reconsolidation rollers, mulch shredders as well as crop protection equipment and viticulture devices.

100% Made in Austria – The devices are produced at the Michelndorf site in complete self-development and -production.
